Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC
Library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC
project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Drosophila melanogaster genome survey sequence SP6 end of BAC BAC 15022 of DrosBAC library from Drosophila melanogaster (fruit fly), genomic survey sequence.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley brosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2: cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                              Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Increased production of L-amino acids by an Escherichia bacterium comprises increasing the expression amount of an L-amino acid excretion protein .
                            L-threonine
                The present sequence is the L-threonine resistance protein, RhtB, from Escherichia coli. The coding sequence may be used to impart L-threonine resistance on E. coli bacteria, which would be useful for producing a high yield of L-threonine. L-threonine resistance means that the bacteria will be able to grow on a minimal medium containing L-threonine at concentration at which the corresponding wild-type strain would not grow. Since the transformed bacteria can grow on the minimal medium, it can synthesise L-threonine, which accumulates. The accumulated amino acids can then be removed from the culture medium. The bacterium of the present invention may also be used to synthesise L-homoserine, L-valine and L-leucine at increased levels.
                                                                                                                                                                                                                                                                            120

The present sequence is the YahN amino acid excretion protein from Escherichia coli. This protein is involved in the production of amino acids, and an increase in its expression leads to an increased accumulation of amino acids in the cell. In this case, an increase in lysine, glutamic acid and proline is achieved if multiple copies of it gene are transfected into a bacterium. The bacterium used is E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               79 itqceeifslirivggayllwfawcsmr----rqstpqmstlqqpisapwyvffrr 130

```

```
9
Escherichia coli. This protein is involved in the production of amino acids, and an increase in its expression leads to an increased accumulation of amino acids in the cell. In this case, an increase in lysine, alanine, valine, histidine, isolaucine, glutamic acid and proline is achieved if multiple copies of its gene are transfected into a bacterium. The bacterium used is E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequences B11630-B11688 represent proteins from Agrobacterium vitis which elicit a hypersensitivity response (HR) in a plant. The invention also relates to nuclocide sequences (A61501-A61524) encoding the A. vitis HR elicitor proteins. The HR is a rapid, localised necrosis that is associated with the active defence of plants against many pathogens, and

occurs when a pathogenic organism interacts with a nonhost plant (i.e. one in which intracellular bacterial growth and disease development do not occur). Like other HR elicitors, the A. vitis elicitor functions in non-host plants by causing a rapid hypersensitive response that results in walling-off and killing of the pathogen. On grape plants, the A. vitis elicitor induces a restricted necrosis of tissues, resulting in the death of plant cells and induction of pathogen resistance. A. vitis HR elicitor proteins, in non-infectious form, are used to treat plants or their seeds to impart resistance to disease, such as those caused by fungi, bacteria or viruses; and to enhance growth, e.g., to increase yield or to provide earlier germination or maturation. The proteins can also be used to control insects, to impart resistance to environmental stresses, e.g., cold, and to improve nutritional value, e.g., altered oil content. The same effects can be produced by producing transgenic plants or seeds by incorporation of DNA that encodes A. vitis HR elicitor proteins. Use of A. vitis HR elicitor proteins, or nucleic acids encoding them, may allow control of previously untreatable diseases; provide systemic treatment; and eliminate the need for biological control agents or polluting

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                         The present sequence is the L-homoserine resistance protein, RhtB, from Escherichia coli. The coding sequence may be used to impart L-homoserine resistance on E. coli bacteria, which would be useful for producing a high yield of L-homoserine. L-homoserine resistance means that the bacteria will be able to grow on a minimal medium containing L-homoserine at a concentration at which the corresponding wild-type strain would not grow. Since the transformed bacteria can grow on the minimal medium, it can synthesise L-homoserine, which accumulates. The accumulated and no acids can then be removed from the culture medium. The bacterium of the present invention may also be used to synthesise L-threonine, L-valine and L-leucine at increased levels.
         Novel Escherichia bacterium having enhanced L-threonine resistance due to enhanced RhtC protein activity, used to produce L-threonine,

Novel RhtB protein, useful for generation of L-homoserine resistance in Escherichia bacteria and large-scale production of e.g. L-homoserine and L-alanine \dot{}
                                                                                                                                                                                                                              The protein, RhtB, which participates in resistance to L-homoserine.

The protein, RhtB, which participates in resistance to L-homoserine.

Amplification of the rhtB gene (see 294405) results in an improvement of the amino acid productivity of E. coll. The invention provides: a protein comprising the present sequence or including a deletion, substitution, insertion and/or addition of 1 or more amino acids and having the activity of making a bacterium resistant to L-homoserine; DNA encoding RhtB; a bacterium, especially of the genus Escherichia, in which L-homoserine cresistance is enhanced by amplifying the copy number or increasing the expression rate of the rhtB DNA, the DNA being carried on a multicopy vector or on a transposon; and a method for producing an amino acid by cultivating the bacterium in a culture medium to produce and accumulate the amino acid in the medium, from which it is recovered. The method is used for the production of L-homoserine, L-alanine, L-isoleucine, L-valine or L-threonine (all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            export protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          66 rsviafevlkw-----agaayliwlgiqqwraagaidlkslastqsrrhl-----fg 112

                                                                                                                                                                                                                                                                                                                                    6
                                                                                                                                            This sequence is the LysE protein product, a lysine export protein. LysG and LysE encode a lysine transport regulatory protein and an export protein, respectively. Microbial production of amino acids (A) is improved by increasing the export-carrier activity and/or the export gene expression in a microorganism that produces (A). The method is specifically used to increase production of lysine, used as an animal feed additive. Other (A) are variously useful as pharmaceuticals, confinents and intermediates for fine chemicals. This method increases the amount of (A) secreted into the culture medium. Export of (A) has been found to depend on a single gene.
                                                                                                                                                                                                                                                                                                                                                                                                                          60 vdllsnaapivldimrw-----ggiayllwfavmaakdamtnk---veapqiieetep 109

                                                                                                                                                                                                                                                                                                                                                                                qq
                                                                                                                                                                                                                                                                                                                                                                                                      à
```

```
The present sequence is the YggA amino acid excretion protein from Escherichia coli. This protein is involved in the production of amino acids, and an increase in its expression leads to an increased accumulation of amino acids in the cell. In this case, an increase in arginine, glutamic acid and lysine is achieved if multiple copies of the gene are transfected into a bacterium. The bacterium used is E. coli.
                                                                                                                                                                                                   of L-amino acids by an Escherichia bacterium
the expression amount of an L-amino acid excretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        124 A----NPKAIIYFGSVFSLFVGDNVGTTARWGIFAL-IIVETLAWFTVVASLFA--LPQM 176

                                                                                                                                                                                   The present sequence is the YfiK amino acid excretion protein from Escherichia coli. This protein is involved in the production of amino acids, and an increased in its expression leads to an increased accumulation of amino acids in the cell. In this case, an increase in threonine, histidine, glutamic acid and proline is achieved if multiple copies of its gene are transfected into a bacterium. The bacterium used

This sequence is the Shewanella colwelliana MigA protein, which is related to the MelA protien of the invention. The invention relates to MelA proteins from marine bacterium of the genus Shewanella, Vibrio or Hyphomonas. The MelA protein is active in catalysing production of melanin synthesis, as well as components of marine exopolysaccharides. The MelA protein can be used as a UV blocker in sunscreen, pigment and dye compositions useful in cosmetic applications, as tints for glass or in paints and coatings for plastics, synthetic resins and fabrics, rubber
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     89 MLRGALKKEAVSAPAPQVELAKSGRSFL-KGLLTNLANPKAIIYFGSVFSLFVGDNVGTT 147

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             11,

                                                                                                                                                                                                                                                                                                                                                                                                                    The polypeptide (R98004) encoded by a partial cDNA clone regions, 1003, 1004 and 1005, that were used to raise polyclonal antibodies in rabbits. Peptides 1004 and 1005, were most immunogenic, generating ELISA-positive sera at dilutions of 1/200000. Cross-reactivity studies using the 3 peptides intended 7 positive specific sera in tumnour samples from 74 patients with primary breast cancer. The pLIVI polypeptide was expressed in the cytosol of cestrogen receptor-positive epithelial cells of breast tumnours. Its presence can be used to predict the propensity for metastatic spread or the responsiveness of a breast tumnour to endocrine treatment. Its inactivation may be used as a means of treating breast cancer and metastasis.
                                                                                                                                                                                                                                                                                                                            Oestrogen-regulated pLIV1 gene and deduced polypeptide - useful for predicting the propensity for metastatic spread or the responsiveness to endocrine treatment of breast tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    53;

This sequence is encoded by a partial sequence of the pLIV1 gene. This protein sequence is an oestrogen regulated gene associated with breast cancer. This sequence can be used in the method of the invention. The method is for determining the risk of metastasis of a female breast tunnour and predicting the responsiveness of a female breast tunnour comprising determining if a tissue sample from the tunnour expresses a polypeptide comprising at least 14 continuous amino acids of the protein encoded by this sequence. The method is useful for determining the risk of metastasis of a female breast tunnour and to predict the responsive of the female breast tunnour to hormone treatment. PLIV1 expression is highly predictive of tunnour coestrogen receptor expression and lymph node involvement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              102 PAPQ-----VELAKSGRSFLKGLLTNLANPKAIIYFGSVFSLFVGDNVGTTARWGIFALI 156

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2, Application US/09097759A;
Sequence 2, Application US/09097759A;
Patent No. 5972663
GENERAL INFORMATION:
APPLICANT: Winterhalter Mr., Christopher
TITLE OF INVENTION: Matroorganisms and Processes for the Fermentative
TITLE OF INVENTION: Preparation of L-cysteine,
TITLE OF INVENTION: L-cysteine, N-acetylserine or Thiazolidine Derivatives
TITLE OF INVENTION: L-cysteine, N-acetylserine or Thiazolidine Derivatives
FILE REFERENCE: Minterhalter
CURRENT APPLICATION NUMBER: US/09/097,759A
CURRENT FILING DATE: 1998-06-16
EARLIER APPLICATION NUMBER: DE 197 26 083
EARLIER PILING DATE: 1997-06-19
NUMBER OF SEQ ID NOS: 12
SOFTWARE: Patentin Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

Wisconsin Augusta HG00301 and HG01428 (from the Human Genome Project and NCHGRS). The entire sequence was independently determined from E. Coll KIL strain MG1655. Predicted open reading frames were determined using Genewark software, Kindly supplied by Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA, 30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that have been correlated with genetic loci are being annotated with GS site Nos. unique ID nos. for the genes in the E. coli Genetic Stock Center (GGS) database at Yale University, kindly supplied by Mary Berlyn. A public version of the database is accessible (http://cgsc.piology.yale.edu). Annotation of the genome sequence more useful by correlating it with other data. Comments to the authors are appreciated. Updated information will be available at the E. coli (http://www.genetics.wisc.edu). *** The E. coli KI2 sequence and products; all new functional assignments courtesy of Monica Riley; added promoters, wisc.edu). *** The E. coli KI2 sequence changes. Annotation updated; this is version MS4. No sequence changes. Annotation updated; this is version MS4. No sequences described in reference 1. The unique numeric identifications are periodically updated; this will genetic sequence of labels. This should allow them to be searched for in Entrez as gene names.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 (bases 1 to 11509)

On May 29, 1995 this sequence version replaced gi:148169.
This sequence was determined as part of the E. coli Genome Project (Frederick R. Blattner, director) at the University of Wisconsin-Madison. The entire sequence was independently determined from E. coli Mol565. Overlaps and conflicts with other sequence determinations are annotated. Reference [1] describes the original sequence determination of a 91408 by sequence. References [2], [3], and [4] describe subsequent corrections and/or updates to that sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                // Organism="Escherichia coli"

* NOTE: This is a 'working draft' sequence. It currently
* consists of 60 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequencing of Mouse
